

**RStudio**

## Working with R – RStudio

RStudio is an Integrated Development Environment (IDE) for R

- It helps the user effectively use R
- Makes things easier
- Is NOT a dropdown statistical tool (such as Stata)
  - See [Rcmdr](#) or [Radiant](#)
- All R Studio snapshots are taken from <http://ayeimanol-r.net/2013/04/21/289/>

[\[source\]](#)

# RStudio

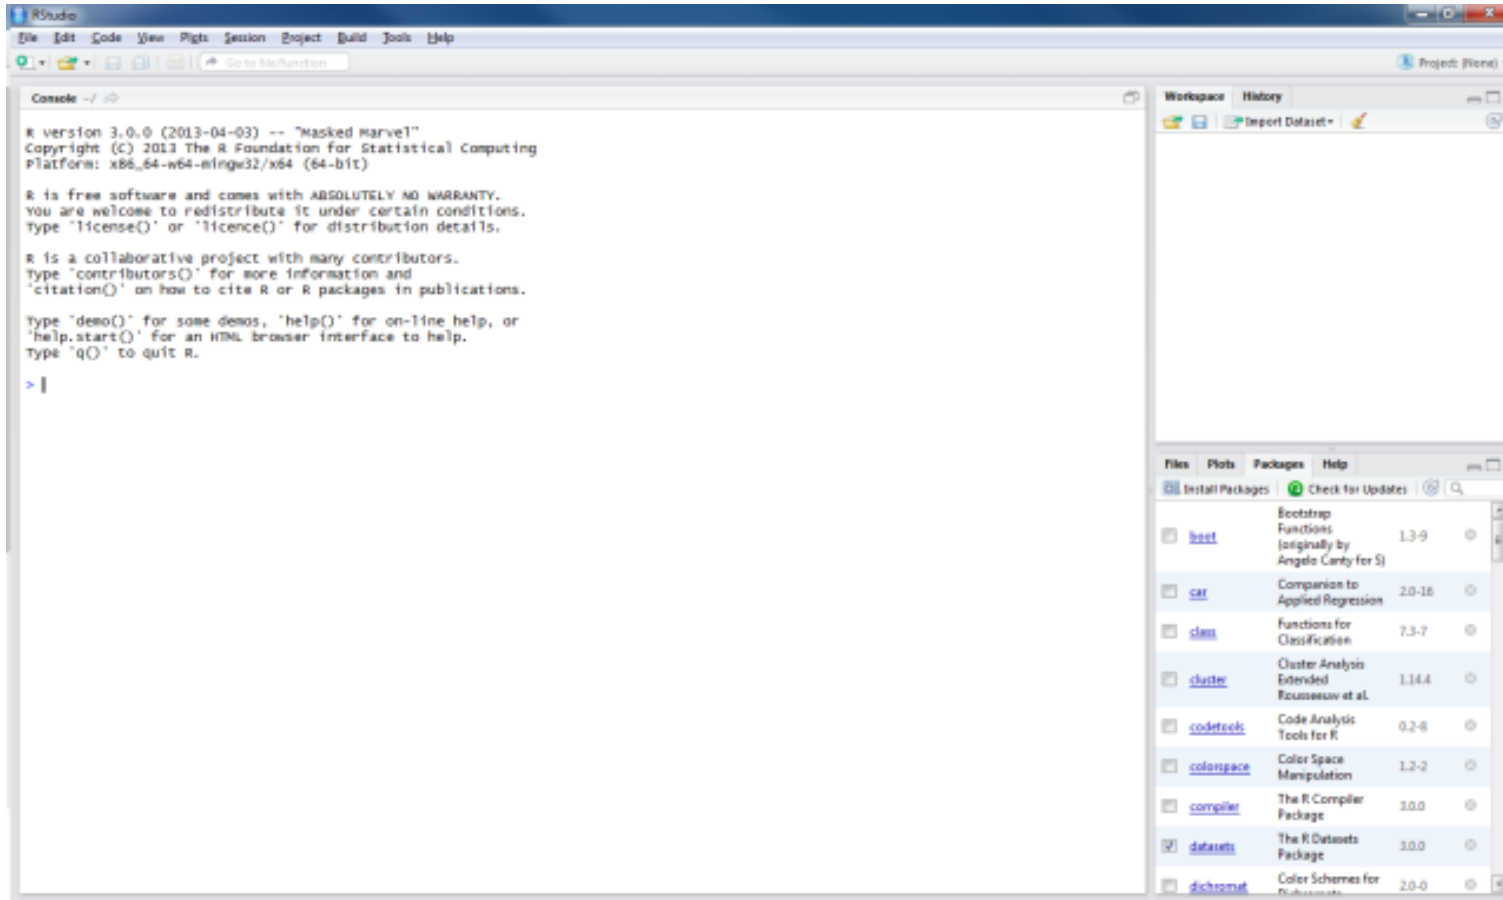

## Easier working with R

- Syntax highlighting, code completion, and smart indentation
- Easily manage multiple working directories and projects

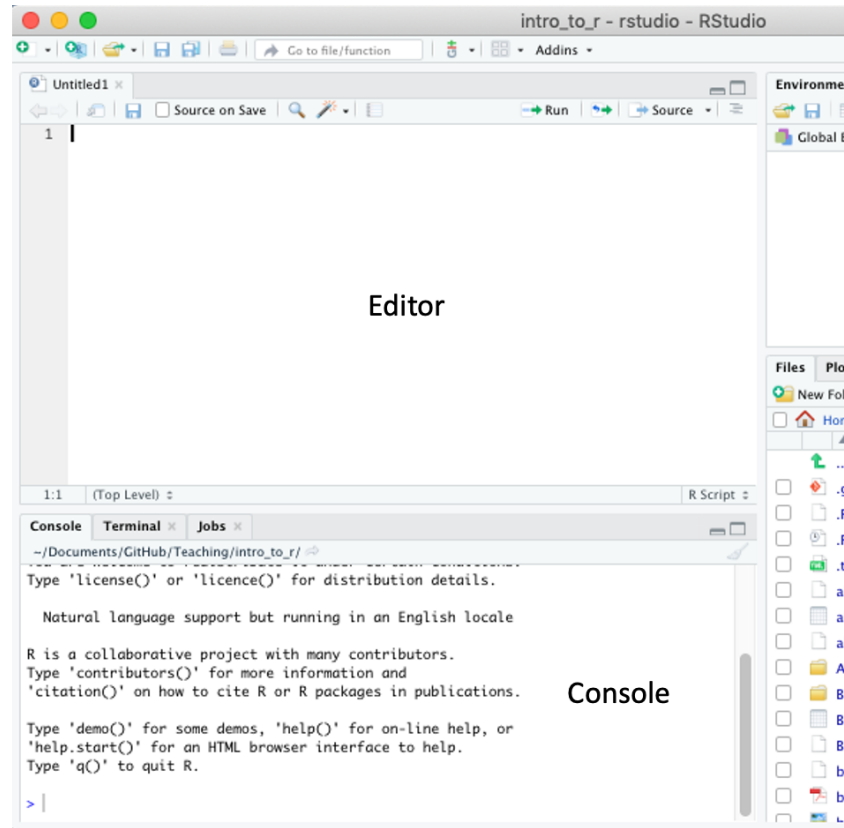

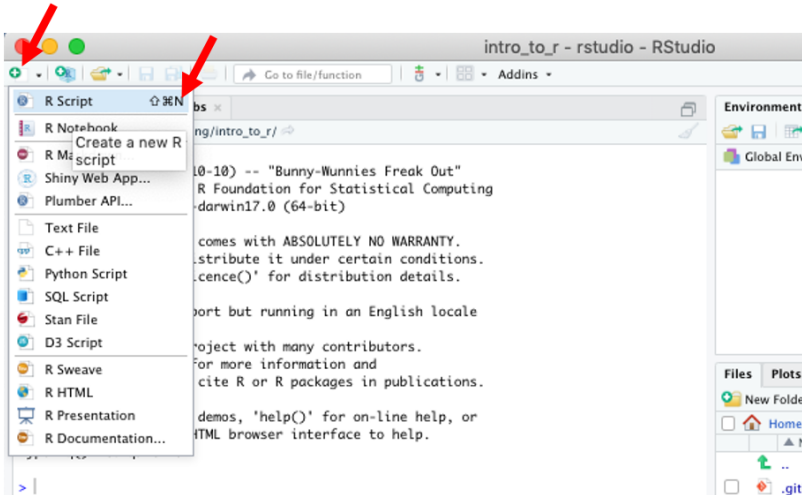

## More information

- Workspace browser and data viewer
- Plot history, zooming, and flexible image and file export
- Integrated R help and documentation
- Searchable command history

# RStudio

# Getting the editor

## Working with R in R Studio - 2 major panes:

1. The **Source/Editor**: “Analysis” Script + Interactive Exploration
  - Static copy of what you did (reproducibility)
  - Top by default
2. The **R Console**: “interprets” whatever you type
  - Calculator
  - Try things out interactively, then add to your editor
  - Bottom by default

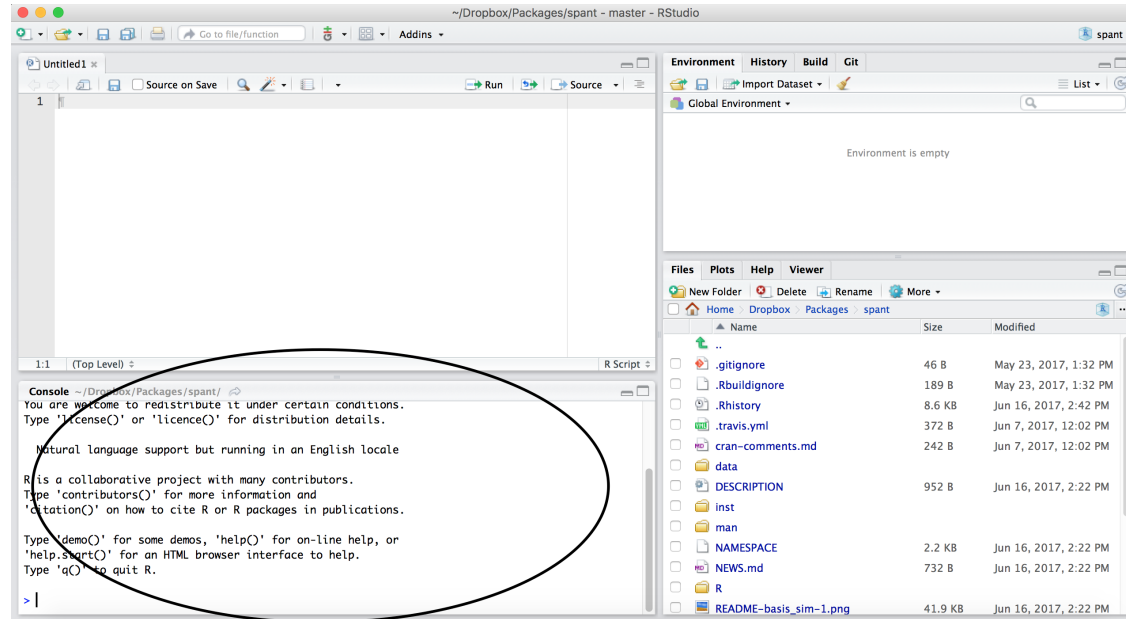

# Source / Editor

- Where files open to
- Have R code and comments in them
- Can highlight and press (CMD+Enter (Mac) or Ctrl+Enter (Windows)) to run the code

In a .R file (we call a script), code is saved on your disk

# R Console

- Where code is executed (where things happen)
- You can type here for things interactively
- Code is **not saved** on your disk

# RStudio

Super useful “cheat sheet”:

<https://github.com/rstudio/cheatsheets/raw/master/rstudio-ide.pdf>

## Write Code

Navigate tabs

Open in new window

Save

Find and replace

Compile as notebook

Run selected code

Re-run previous code

Source with or without Echo

Show file outline

Multiple cursors/column selection with **Alt + mouse drag**.

Code diagnostics that appear in the margin. Hover over diagnostic symbols for details.

Syntax highlighting based on your file's extension

Tab completion to finish function names, file paths, arguments, and more.

Multi-language code snippets to quickly use common blocks of code.

Jump to function in file

Change file type

## R Support

Import data with wizard

History of past commands to run/copy

Display .RPres slideshows **File > New File > R Presentation**

Load workspace

Save workspace

Delete all saved objects

Search inside environment

Choose environment to display from list of parent environments

Display objects as list or grid

Displays saved objects by type with short description

View in data viewer

View function source code

Create folder

Upload file

Delete file

Rename file

Set As Working Directory

Go To Working Directory

Change directory

Path to displayed directory

A file browser keyed to your working directory. Click on file or directory name to open.

The screenshot shows the RStudio IDE interface with several panels and windows. The main editor window displays R code with syntax highlighting and line numbers. The console at the bottom shows the execution of R commands. The environment pane on the right shows the current workspace with variables like 'iris' and 'foo'. The file browser at the bottom right shows the current directory structure. Various callouts point to different parts of the interface, providing a comprehensive overview of its features.

# RStudio layout

The screenshot displays the RStudio IDE interface with the following components:

- Source Editor:** Contains an R Markdown document titled "first\_markdown". The document includes a YAML header, R code chunks for setup and cars data, and a text block explaining R Markdown.
- Environment:** Shows the "Global Environment" which is currently empty.
- Files:** A file explorer showing the directory structure of the project, including files like .gitignore, .Rbuildignore, .Rhistory, .travis.yml, and various data files.
- Console:** Displays the output of the R session, including the R startup message and the results of the R code chunks.

```
1 ---
2 title: "first_markdown"
3 output: html_document
4 ---
5
6 ```{r setup, include=FALSE}
7 knitr::opts_chunk$set(echo = TRUE)
8 ```
9
10 ## R Markdown
11
12 This is an R Markdown document. Markdown is a simple formatting syntax for
13 authoring HTML, PDF, and MS Word documents. For more details on using R
14 Markdown see <http://rmarkdown.rstudio.com>.
15
16 When you click the Knit button a document will be generated that includes
17 both content as well as the output of any embedded R code chunks within the
18 document. You can embed an R code chunk like this:
19
20 ```{r cars}
21 # R code chunk for cars data
22 ```
```

Console output:

```
~/Documents/GitHub/Teaching/intro_to_r/
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

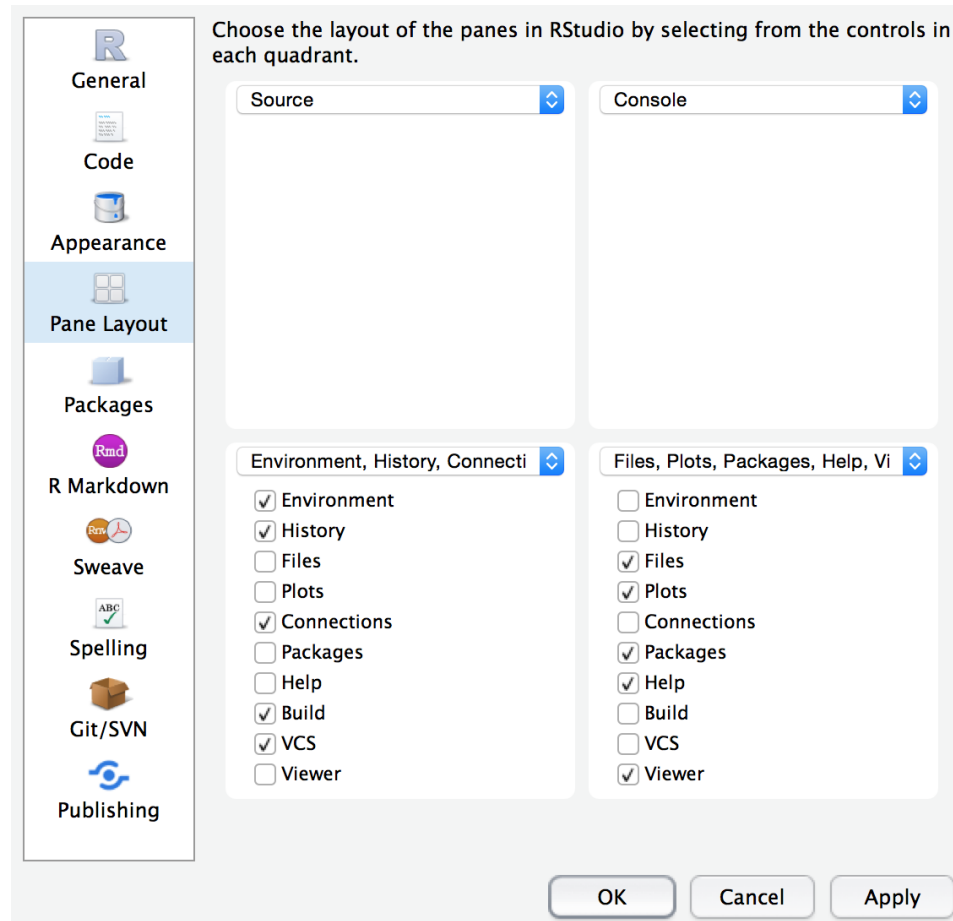

> |
```

Name	Size	Modified
..		
.gitignore	245 B	May 18, 2021
.Rbuildignore	16 B	May 18, 2021
.Rhistory	43 B	Jun 10, 2021
.travis.yml	666 B	Jun 9, 2021
all_functions.xlsx	13.4 KB	Jun 8, 2021
all_the_functions.csv	57.3 KB	Jun 8, 2021
all_the_packages.txt	211 B	May 18, 2021
Arrays_Split		
Basic_R		
Best_Model_Coefficients.csv	587 B	May 18, 2021
Best_Model_Coefficients.xlsx	3.8 KB	May 18, 2021
bibliography.bib	599 B	May 18, 2021
black_and_white_theme.pdf	45.1 KB	May 18, 2021
bloemhagen_logo_small_horizont	25.4 KB	May 18, 2021

# RStudio Layout

If RStudio doesn't look the way you want (or like our RStudio), then do:

RStudio -> Preferences -> Pane Layout

# Workspace/Environment

The screenshot shows the RStudio interface with the following components:

- Top Panel:** Untitled1 script editor with a single line of code.
- Environment Pane:** Located on the right, it shows the "Global Environment" and states "Environment is empty". This pane is circled in black.
- Files Pane:** Located below the Environment pane, it shows the file structure of the "spant" package. The files and folders listed are: `..`, `.gitignore` (46 B, May 23, 2017, 1:32 PM), `.Rbuildignore` (189 B, May 23, 2017, 1:32 PM), `.Rhistory` (8.6 KB, Jun 16, 2017, 2:42 PM), `.travis.yml` (372 B, Jun 7, 2017, 12:02 PM), `cran-comments.md` (242 B, Jun 7, 2017, 12:02 PM), `data`, `DESCRIPTION` (952 B, Jun 16, 2017, 2:22 PM), `inst`, `man`, `NAMESPACE` (2.2 KB, Jun 16, 2017, 2:22 PM), `NEWS.md` (732 B, Jun 16, 2017, 2:22 PM), `R`, and `README-basis_sim-1.png` (41.9 KB, Jun 16, 2017, 2:22 PM).
- Console:** Located at the bottom, it shows the R startup message: "You are welcome to redistribute it under certain conditions. Type 'license()' or 'licence()' for distribution details. Natural language support but running in an English locale R is a collaborative project with many contributors. Type 'contributors()' for more information and 'citation()' on how to cite R or R packages in publications. Type 'demo()' for some demos, 'help()' for on-line help, or 'help.start()' for an HTML browser interface to help. Type 'q()' to quit R." followed by a prompt `> |`.

## Workspace/Environment

- Tells you what **objects** are in R
- What exists in memory/what is loaded?/what did I read in?

## History

- Shows previous commands. Good to look at for debugging, but **don't rely** on it.  
Instead use RMarkdown!
- Also type the “up” key in the Console to scroll through previous commands

## Other Panes

- **Files** - shows the files on your computer of the directory you are working in
- **Viewer** - can view data or R objects
- **Help** - shows help of R commands
- **Plots** - pictures and figures
- **Packages** - list of R packages that are loaded in memory

Let's take a look at R Studio  
ourselves!

# Lab: Starting with R and RMarkdown

## ▯ [RStudio Lab](#)

To do this lab we need to:

1. Download the file at the link above by clicking on the link or typing in:  
[https://jhudatascience.org/intro\\_to\\_r/modules/RStudio/lab/RStudio\\_L](https://jhudatascience.org/intro_to_r/modules/RStudio/lab/RStudio_L)  
(Also on the [website](#) schedule page - Lab for day 1)
2. Find the downloaded file on your computer
3. Open the file in RStudio

This may require finding your downloads on your computer.

Recall that these videos can help:

If you have a PC: <https://youtu.be/we6vwB7DsNU>

If you have a Mac: <https://www.youtube.com/watch?v=Ao9e0cDzMrE>

## R Markdown file

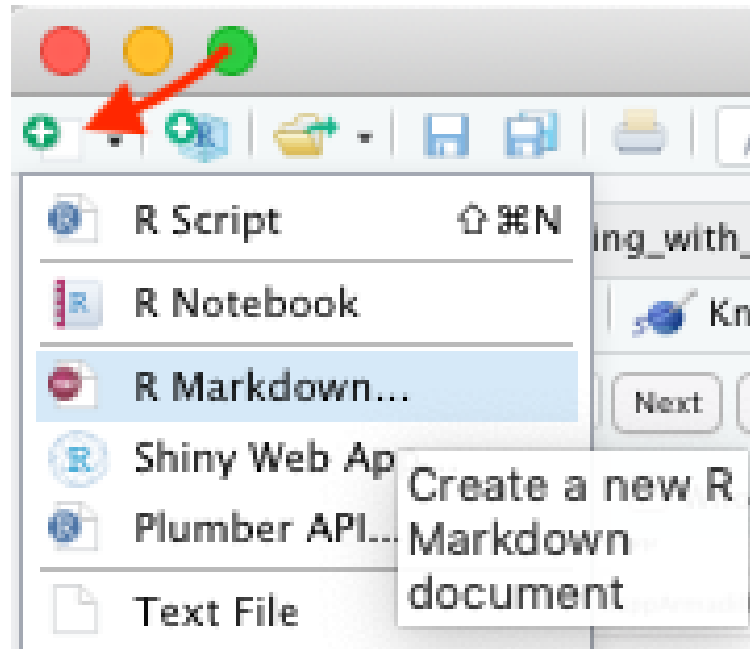

R Markdown files (.Rmd) help generate reports that include your code and output. Think of them as fancier scripts.

1. Helps you describe your code
2. Allows you to check the output
3. Can create many different file types

## Create an R Markdown file

Go to File → New File → R Markdown

Call your file “first\_markdown”

# Code chunks

Within R Markdown files are code “chunks”

This is where you can type R code and run it!

# Create Chunks

To create a new R code chunk:

Copy paste an existing chunk in the R Markdown file and replace the code **OR**

1. Use the insert code chunk button at the top of RStudio.

1. Select R as the language:

## Run previous chunks button

You can run all chunks above a specific chunk using this button:

```
```{r, out.width = "80%", echo = FALSE, fig.align='center'}  
knitr::include_graphics("images/chunk.png")  
```
```

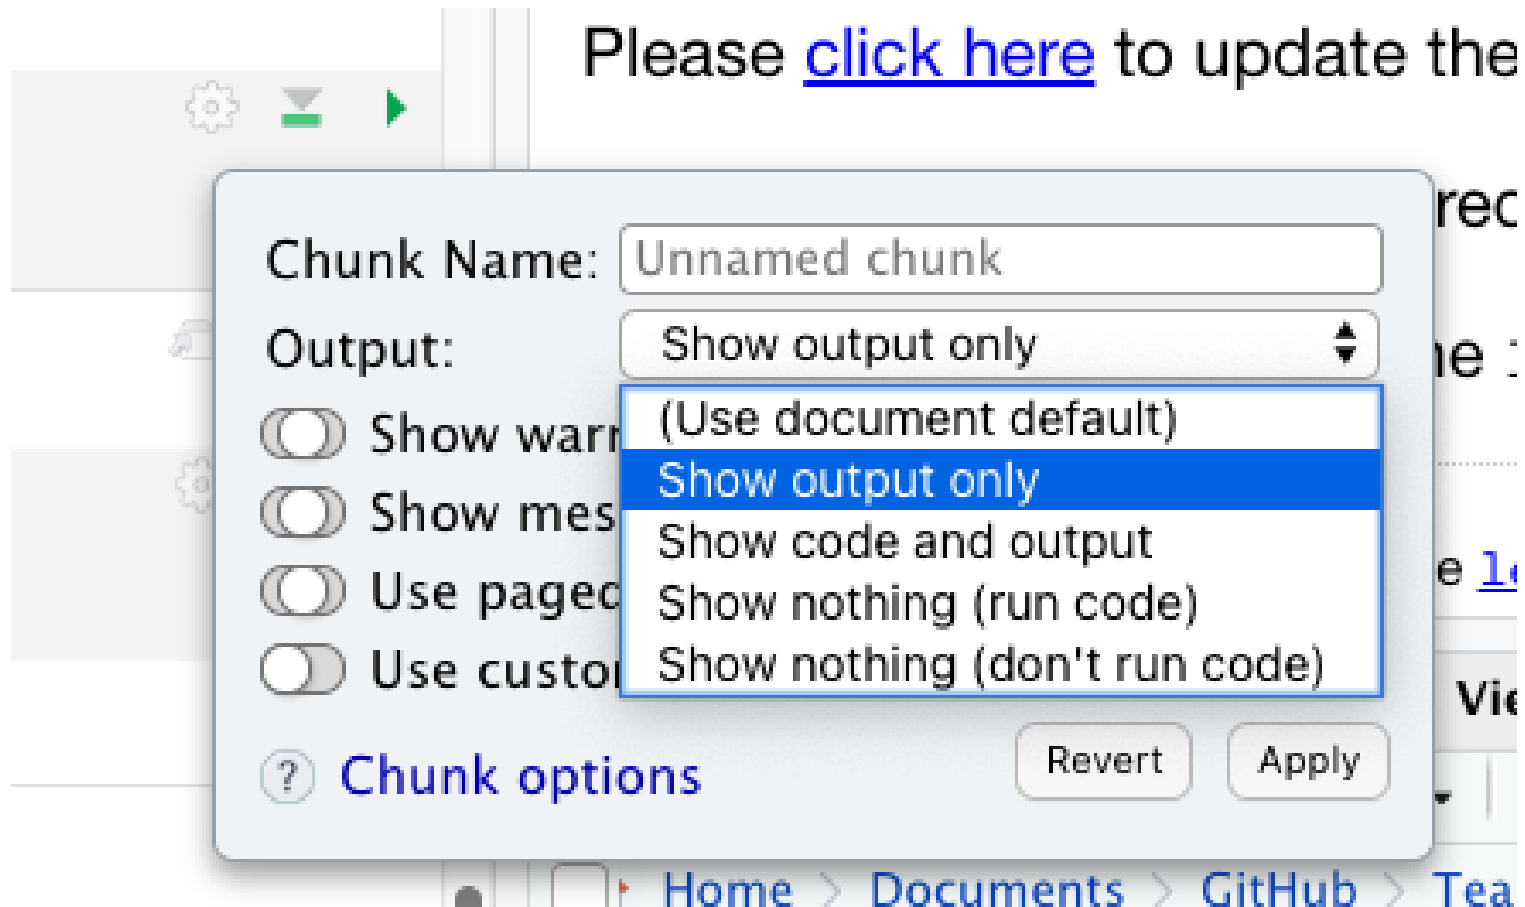

# Chunk settings

## Chunk settings

You can specify if a chunk will be seen in the report or not.

## Knit file to html

This will create a report from the R Markdown document!

## Useful R Studio Shortcuts

- `Ctrl + Enter` in your script evaluates that line of code
  - It's like copying and pasting the code into the console for it to run.
- `Ctrl+1` takes you to the script page
- `Ctrl+2` takes you to the console
- [http://www.rstudio.com/ide/docs/using/keyboard\\_shortcuts](http://www.rstudio.com/ide/docs/using/keyboard_shortcuts)

# Summary

- RStudio makes working in R easier
- the Editor is for static code like scripts or R Markdown documents
- The console is for testing code
- R markdown documents are really helpful for lots of reasons!
- R code goes within what is called a chunk
- Code chunks can be modified so that they show differently in reports
